Abstract Factory Pattern

Abstract Factory Pattern

Shape (interface)

```
public interface Shape {
   void draw();
}
```

Rectangle

```
public class Rectangle implements Shape {
    @Override
    public void draw() {
        System.out.println("Inside Rectangle::draw() method.");
    }
}
```

Abstract Factory

```
public abstract class AbstractFactory {
   abstract Color getColor(String color);
   abstract Shape getShape(String shape);
}
```

Shape Factory

```
public class ShapeFactory extends AbstractFactory {
   @Override
   public Shape getShape(String shapeType){
      if(shapeType == null){
         return null;
     if(shapeType.equalsIgnoreCase("CIRCLE")){
         return new Circle();
     }else if(shapeType.equalsIgnoreCase("RECTANGLE")){
         return new Rectangle();
     }else if(shapeType.equalsIgnoreCase("SQUARE")){
         return new Square();
      return null;
  @Override
   Color getColor(String color) {
      return null;
```

Factory Producer

```
public class FactoryProducer {
   public static AbstractFactory getFactory(String choice) {
      if(choice.equalsIgnoreCase("SHAPE")) {
          return new ShapeFactory();
      }else if(choice.equalsIgnoreCase("COLOR")) {
          return new ColorFactory();
      }
      return null;
   }
}
```

Main

```
public class AbstractFactoryPatternDemo {
   public static void main(String[] args) {
      //get shape factory
      AbstractFactory shapeFactory = FactoryProducer.getFactory("SHAPE");
      //get an object of Shape Circle
      Shape shape1 = shapeFactory.getShape("CIRCLE");
      //call draw method of Shape Circle
      shape1.draw();
      //get an object of Shape Rectangle
      Shape shape2 = shapeFactory.getShape("RECTANGLE");
      //call draw method of Shape Rectangle
      shape2.draw();
      //get an object of Shape Square
      Shape shape3 = shapeFactory.getShape("SQUARE");
      //call draw method of Shape Square
      shape3.draw();
     //get color factory
      AbstractFactory colorFactory = FactoryProducer.getFactory("COLOR");
      //get an object of Color Red
      Color color1 = colorFactory.getColor("RED");
      //call fill method of Red
      color1.fill();
      //get an object of Color Green
      Color color2 = colorFactory.getColor("Green");
      //call fill method of Green
      color2.fill();
      //get an object of Color Blue
      Color color3 = colorFactory.getColor("BLUE");
      //call fill method of Color Blue
      color3.fill();
```

Bank Example
